

(a) Mie peak wavelength — Link & El-Sayed (1999)

$R^2 = 0.982$ | $\text{Max } |\text{residual}| (d \geq 20 \text{ nm}) = 6.7 \text{ nm}$ | $\text{Threshold: } \pm 3 \text{ nm}$

(b) LSPR bulk RI sensitivity — Mock et al. (2003)

$\text{Model } S = 53.4 \text{ nm/RIU}$ vs $\text{ref } S = 34 \text{ nm/RIU}$ | $\text{Error} = 57\%$ (threshold: $\pm 10\%$)

(c) Evanescent penetration depth — Polynkin et al. (2005)

$\text{Model } l_d = 83 \text{ nm}$ vs $\text{ref } l_d = 150 \text{ nm}$ at $\delta = 40 \mu\text{m}$ | $\text{Error} = 45\%$ (threshold: $\pm 20\%$)
